Patch Notes

TIMS 26.2.5 – 26 August 2026

Summary

This maintenance patch (package version 26.2.5-797) delivers a fix for roster saving when preparing public holiday rosters, along with an enhancements covering the superannuation export in Payroll.

Bug Fixes & Improvements

Roster – Roster save failing when preparing public holiday rosters

When preparing a roster for an upcoming public holiday, moving the public holiday duties onto the scratchpad worked as expected, but an error appeared when saving the roster. This was caused by days-off shifts on the roster missing their award information. This has been fixed, and rosters containing public holiday duties now save correctly.

New Features & Enhancements

Payroll – Super export now includes the fund name

When superannuation payments were exported from Payroll for upload to the Click Super clearing house, the export file did not include the name of each super fund. Because the fund name is mandatory for self-managed super funds, these funds produced errors when the file was uploaded. The export now includes the fund name for every fund, so files upload cleanly without fund-name errors.
