

TIMS

Patch Notes

TIMS 26.2.6 – 15 September 2026

Summary

TIMS 26.2.6 is a maintenance patch release for TIMS 26.2. It resolves four issues across the Despatch, Payroll and Roster modules.

Bug Fixes & Improvements

Despatch – Yard Plan failed to open from the Service Calendar when buses were berthed

Opening a Yard Plan from the Service Calendar toolbar produced an error whenever the selected plan already had one or more buses berthed in it. Empty yard plans opened normally, and the same plans opened without issue from the Despatch and Operations screens. This has been fixed so Yard Plans open correctly from the Service Calendar regardless of whether buses are berthed.

Payroll – Pay Summary (Employment Type) report failed to run

The Pay Summary (Employment Type) report, commonly used for ABS reporting, returned an error when run from the Payroll module and could not be produced. This was caused by an incorrect internal reference to the report. The reference has been corrected and the report now runs successfully.

Roster – Deleting lines from the Shift Sheet inserted unexpected crib entries

When deleting lines from the Shift Sheet view in the Operations screen, TIMS would sometimes insert a Crib Start or Crib Finish line in their place. The behaviour was intermittent and was reported across several depots and databases. This has been fixed so that deleting lines from the Shift Sheet removes only the selected lines.

Roster – Fatigue Breaches Present label not shown after reopening the Operations screen

When a fatigue breach was created, the Fatigue Breaches Present label appeared in the Operations screen toolbar as expected. However, if the screen was closed and reopened while the breach remained, the label was no longer displayed. The fatigue warning icon in the Employees column could also be slow to appear. Both issues have been fixed so the breach indicators display reliably.
