Fleet Manager

System Fixes

Ticket #	Comment
TAP - 71736	**Cached information when copying plant** When copying a plant record, much of the tab detail (i.e. Components) was retained on the new plant record. Change made to clear the cache of all tab information when copying plant record.
TAP-78922	**Add blank labour line if no service on Fault** When a Fault type or fault sub type did not have a default service linked, the workorder would generate with no workorder lines, and render the workorder unusable. Change made to add a blank labour line (no service code) to the workorder which will force the user to select the correct service for the line to save.

Enhancements

Ticket #	Comment
TAP-80670	**Create Fuel Economy Report with Hours instead of KMS** Replicate existing fuel economy report with change to display hours instead of kilometres.
TAP-80557	**Create Management Summary report by Plant Type** Replicate existing management summary report with change to display by Plant Type.
	New Feature – Allow tracking of Additional Work Allow linking of faults created by mechanic to original workorder for tracking progress and status purposes. Includes the ability to create faults from the workorder screen. Contact support for more information.
