TAP-94539	**Text Box Covering Add Button – Workshop Touch** The Text Box when scanning an item in the Workshop Touch screen was partly covering the Add Button, the Item Text Box has been resized back to the original size.
TAP-94340	**WorkOrder Screen Resizing** When the work order was resized to maximum screen, part of the screen was grey the work order did not increase length of the size of the screen. If the screen is maximised the work order fills the full screen
	Workshop Touch Mechanic Clocking When a mechanic clocks onto a workorder through Workshop Touch, this will now count the time from clocking on to clocking off, the time can be added/changed on the touchscreen or the work order. The mechanics time will reflect in the workorder with a new column. The original column will still be used to charge costs to the bus. The time clocked can be updated for accuracy for efficiency reports.

TAP-94338	**Error message – Value too long for receiving description (60)** When posting a receiving an error message was displaying if the description was longer than 60 characters, but the description field allowed for more than 60 characters. This has been rectified by limiting the description field.
